

Energy monitoring software é.VISOR among the top IT solutions in 2012

Kassel. The energy monitoring and efficiency analysis software é.VISOR created by the Limón GmbH in Kassel was named one of the best solutions for Green IT at the IT Innovation Award ceremony organized by the German Mid-sized Companies Initiative. CEO Dr. Mark Junge commented, "We are proud to have such a prestigious jury recognize our software's potential."

Under the patronage of IBM, the "Initiative Mittelstand" (Mid-sized Companies Initiative) has conferred the IT Innovation Award to companies with highly useful and innovative IT solutions since 2004. This year's jury, consisting of 120 professors, scientists, industry representatives, and IT journalists, selected the 20 most innovative solutions in several categories to receive the title "Best of 2012".

The energy monitoring and efficiency analysis software é.VISOR created by the Limón GmbH was particularly convincing to jurors in the Green IT category and is thus among the finalists of more than 2500 submissions. In 2012, Green IT was the most popular category for applications, underlining the significance of é.VISOR's place in the top three.

Energy management systems are quickly gaining importance. In addition to constantly rising energy prices, ever more stringent environmental regulations, and the decision to acquire certification according to DIN ISO 50001, countless positive examples show how energy management systems can yield considerable savings. To do so, however, the managers in a company must have reliable key data and integrated energy efficiency indicators.

The energy monitoring system é.VISOR created by the Limón GmbH not only collects relevant energy and production data; it also allows for the calculation of ratio data and an analysis of energy efficiency at the touch of a button.

“Moreover, é.VISOR supports relevant processes in the energy management context,” Dr. Junge adds, “making é.VISOR one of the key tools for improving energy efficiency!” These were likely the points that convinced the jury as well as numerous satisfied customers.

Limón GmbH is one of the leading German providers of services and solutions for energy efficiency in industrial applications. From energy efficiency analyses to concept design and planning, Limón aids manufacturing companies every step of the way.
